Vegas Backup Frequently Asked Questions

Q: What is Vegas Backup?

A: Vegas Backup offers you peace of mind. Your data is securely backed-up off of your premises to our secure data location. If anything happened to your data, from accidental file deletion, hard drive crash, theft, fire or other catastrophe, your data can easily be restored by using our backup utility or on-line user site.

Q: Why choose Vegas Backup over other backup methods (External Hard Drive, Tape, Thumb Drive)?

A: Although these backup methods are good, they require user intervention. More often than not, tapes are not rotated properly, the media is corrupt or the backup is just not getting done. Also, unless the media is being taken off-site, it can be destroyed by fire, or stolen.

Q: Who is Vegas Backup?

A: Vegas Backup is part of Stimulus Technologies. Stimulus Technologies was formed in 1995 as a technology service company and offers other services, including network maintenance, high speed Internet service, VoIP service, medical software service and support and custom programming. Vegas Backup is a major piece of Stimulus Technologies services to offer complete turn-key solutions to small and medium sized businesses.

Q: How do I get started?

A: Vegas Backup offers a free 30-day trial of the software. Go to <http://www.vegasbackup.com> to download the client software to get started.

Q: Can I run this on more than one computer without creating multiple accounts?

A: Yes. You can install this on as many computers as you want.

Q: How is the service billed?

A: Once you are satisfied with the service, we will charge your credit card automatically each month.
